

FOUR CORE MODELS FOR SCOPING REQUIREMENTS

FOR THOSE SEEKING TO:

- Improve collaboration and communication with stakeholders
- Expand knowledge of modeling techniques and industry best practices
- Visually represent the scope of requirements
- Model various aspects of your project
- Improve skills for facilitating a requirements workshop
- Reduce the risk of missed requirements

YOU WILL BE ABLE TO:

- Illustrate the entities within the scope of your project
- Depict the interaction of primary and secondary actors with a system domain
- Represent inputs to and outputs from a system boundary
- Visualize the sequence of activities between roles in a process flow
- Identify inaccuracies in the models through aspects of traceability
